Portfolio

Professional Summary

Software Engineer with 4+ years of experience building enterprise frontend applications using **React.js, JavaScript, TypeScript, Redux Toolkit, HTML5, and CSS3**. Experienced in developing reusable components, responsive interfaces, REST API integrations, authentication flows, and performance-focused UI solutions for enterprise applications. Strong background in API testing, JMeter performance testing, application security remediation, and Agile delivery. Focused on maintainable component architecture, responsive design, usability, and accessibility-conscious frontend development.

Technical Skills

Frontend: React.js, JavaScript, TypeScript, Redux Toolkit, React Router, HTML5, CSS3, DXC Halstack
API & Testing: REST APIs, API Testing, Postman, Swagger, Apache JMeter, Manual Testing
Tools: Git, Jenkins, VS Code, Eclipse
Application Servers: IBM WebSphere Liberty, Apache Tomcat

Professional Experience

DXC Technology Jun 2022 – Present
Analyst I Software Engineer *Noida, India*

Claims Assistant

- Developed the frontend for **Claims Assistant**, an enterprise claims application built with **React 19 and Material UI (MUI)**, integrating with ServiceNow APIs to support end-to-end claim creation workflows.
- Implemented a reusable **multi-step claim form** supporting both AI-assisted claim creation with prefilled data from backend ServiceNow APIs and manual claim entry through the same UI workflow.
- Built form state management, field validation, conditional rendering, and data mapping logic to transform ServiceNow API responses into pre-populated form fields while allowing users to review and modify extracted information.
- Implemented claim lifecycle actions including **Save Draft, Send for Review, and Discard Claim**, with API integrations to persist and update claim records in ServiceNow.
- Developed reusable React components and responsive MUI-based layouts to maintain consistency across multi-step screens and improve usability of the claims creation experience.

PDL Application

- Developed and enhanced enterprise web applications using **React.js, JavaScript, TypeScript, and DXC Halstack**, delivering reusable and responsive UI components for insurance applications.
- Designed reusable **DataGrid components** supporting filtering, sorting, searching, and pagination, improving consistency and maintainability across the PDL application.
- Integrated **REST APIs** and implemented React-based authentication flows, including a reusable authentication hook for access token lifecycle management, automatic token renewal, and authorized API requests.
- Contributed to the **OpenAM to Keycloak authentication migration** by refactoring frontend authentication flows and integrating modern access and refresh token-based authentication.
- Improved frontend maintainability and runtime efficiency through reusable component architecture, efficient state management, code cleanup, and removal of lint issues.
- Collaborated with development, QA, DevOps, and business teams in Agile sprints, contributing to code reviews, Git-based releases, defect resolution, and production deployments.

Key Projects

PortfolioLens | GitHub
React 19, TypeScript, Redux Toolkit, Vite, Tailwind CSS, Recharts, TanStack Table

– Built a client-side investment portfolio analytics platform for Indian retail investors, providing portfolio valuation, ROI, XIRR, asset allocation, benchmark comparison, tax analysis, goal-based SIP planning, and portfolio health diagnostics.

Bite Buddy | GitHub
React 18, JavaScript, Redux Toolkit, Firebase

– Developed a responsive food-ordering interface consuming live food-service API data, with **Redux Toolkit cart management**, dynamic restaurant data, and reusable React components for an interactive user experience.

Education

Lovely Professional University 2018 – 2022
B.Tech in Mechanical Engineering *Jalandhar, Punjab*
